

GIT CLASS 2

GIT RM : Used to unstage the files (untrack)

```
git rm --cached filename
```

GIT RESET: This command is used to delete latest commits

```
git reset --hard HEAD~1 : used to delete latest commit along with changes
```

```
git reset --soft HEAD~1 : used to delete only latest commit
```

```
git update-ref -d HEAD: used to delete all commits at a time (only commits)
```

GIT REFLOG:

git reflog shows the history of where your local HEAD and branches pointed. It is mainly used to recover accidentally deleted commits or undo mistakes.

GIT CHERRY PICK:

git cherry-pick used to pick a specific commit and it also helps us to retrieve the deleted commit.

copies a specific commit from one branch and applies it to your current branch.

GIT REVERT:

Git revert command is used to delete a specific change based on commit it and that will creates a new commit

Command: `git revert commit_id`

GIT RESTORE:

Git restore command is used to restore the deleted data/file

Command: `git restore filename`
